

Make Catalog

powerful and flexible tool for easy and fast creating pictures catalog in QuarkXPress™, Adobe® InDesign™ and Adobe® Illustrator™

- Do you need to import many pictures in your documents?
- Do you need to make catalog of your picture, scan or photo library from different folders and export it to PDF?
- Are cataloguing options of Photoshop, Graphic Converter or other applications not enough for you?
- Are you tired of poor previews in such applications like iView, Cumulus and other, and you don't have enough time to print your jobs from it?

In this case Make Catalog is exactly for you!

- adjustable catalog options: page size and margins, columns/rows number, picture dimensions, gutters between pictures, ability naming pictures with chosen font, option for resizing picture boxes to fit picture
- header and footer, name of pictures folder, automatic page and section numbering
- as result you have not bitmapped picture or thumbnails window, but a document in your favorite program

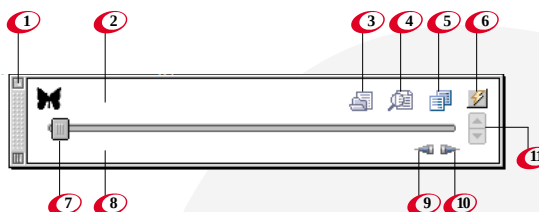

Font Chooser

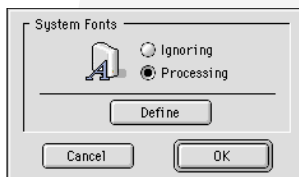

utility allows You to easy, intuitive choose font face in QuarkXPress™, Adobe® InDesign™ and Adobe® Illustrator™

- now you can choose font not only by name, but by a typeface directly in QuarkXPress™
- autopilot mode helps you to minimise time for finding font face exactly you need

- 1 quit program.
- 2 font name or progress status.
- 3 new font settings. Fonts base initialisation. It is a good idea to make font sets for different kinds of font faces, like Ornament, Serif, Special etc.

You can define active fonts as "System Fonts" for excluding them from fonts base. In this case You don't need to view them every time.

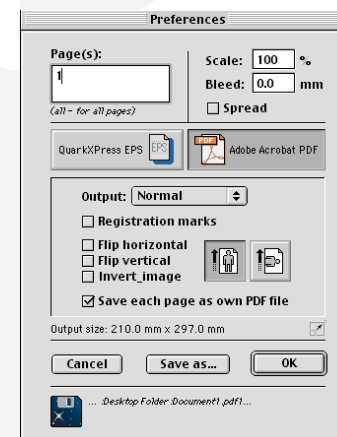

- 4 new text settings. This way you choose text object for testing. It may be selected text, text in selected text box or text in topmost text box when some QuarkXPress™ objects selected.
- 5 duplicate testing text.
- 6 turn autopilot mode ON and OFF. In autopilot mode font face changes automatically with speed and direction defined in Speed Control (11).
- 7 font face slider. You can drag it or click on ends of it. Hot help (8) displays current font number and number of all fonts in fonts base.
- 8 hot help display. Shows information about object.
- 9, 10 backward and forward movement.
- 11 speed control. Available only in autopilot mode. Lets you choose speed and direction of movement of font face slider. Hot help displays current speed setting.

Save pageS as EPS/PDF

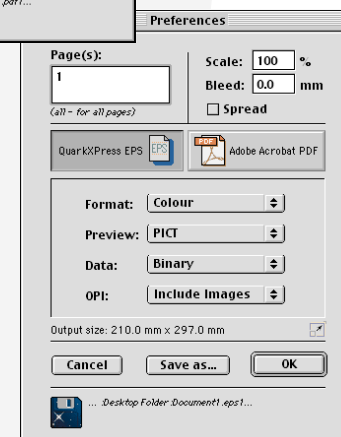

utility that helps you to export pages from QuarkXPress™ documents in EPS/PDF formats

- save each page in individual file
- ability to work in multidocument mode
- useful for imposition

s a v e

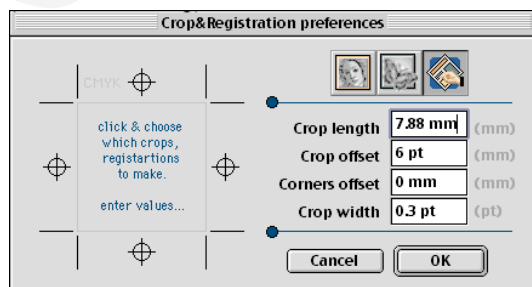

I am hope You enjoy your software!..

Crop&Registration marks

utility allows You to easy and fast create crop and registration marks based on an object or group of objects in QuarkXPress™, Adobe InDesign® and Adobe Illustrator®

- adjustable crop/registration values
- same method of work in all target applications

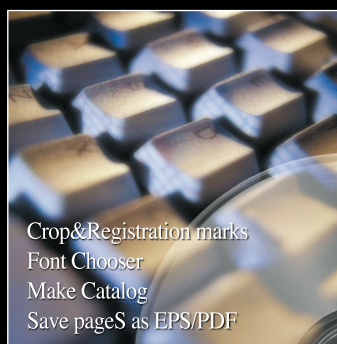

First of all you must select object or a group of objects in your target application (one of QuarkXPress™, Adobe InDesign® or Adobe Illustrator®). Than you choose this application as target application in Crop&Registration Marks.

You can choose which crop, registrations are made and it's parameters:

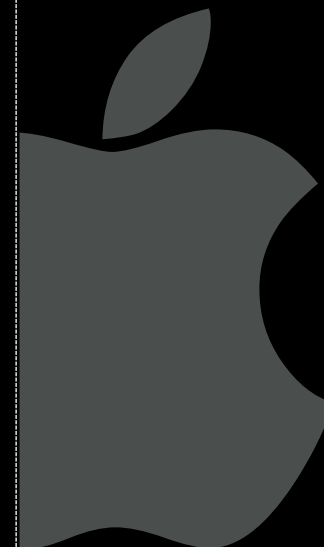

- crop length,
- crop offset,
- corners offset (for defining bleed),
- crop width.

For QuarkXPress you can use different measurements ("5 mm + 10pt", f.e.).

Hot help display always shows information about object on which cursor is positioned.
